Copyrightys

Project description

Copyrightys was initially created as service which allowed to confirm ownership of file (graphic, text, audio, video or any other) and receive certificate about date and time when the file was uploaded on the server.

Challenge:

Implement the client's idea

What has been done

Information architecture

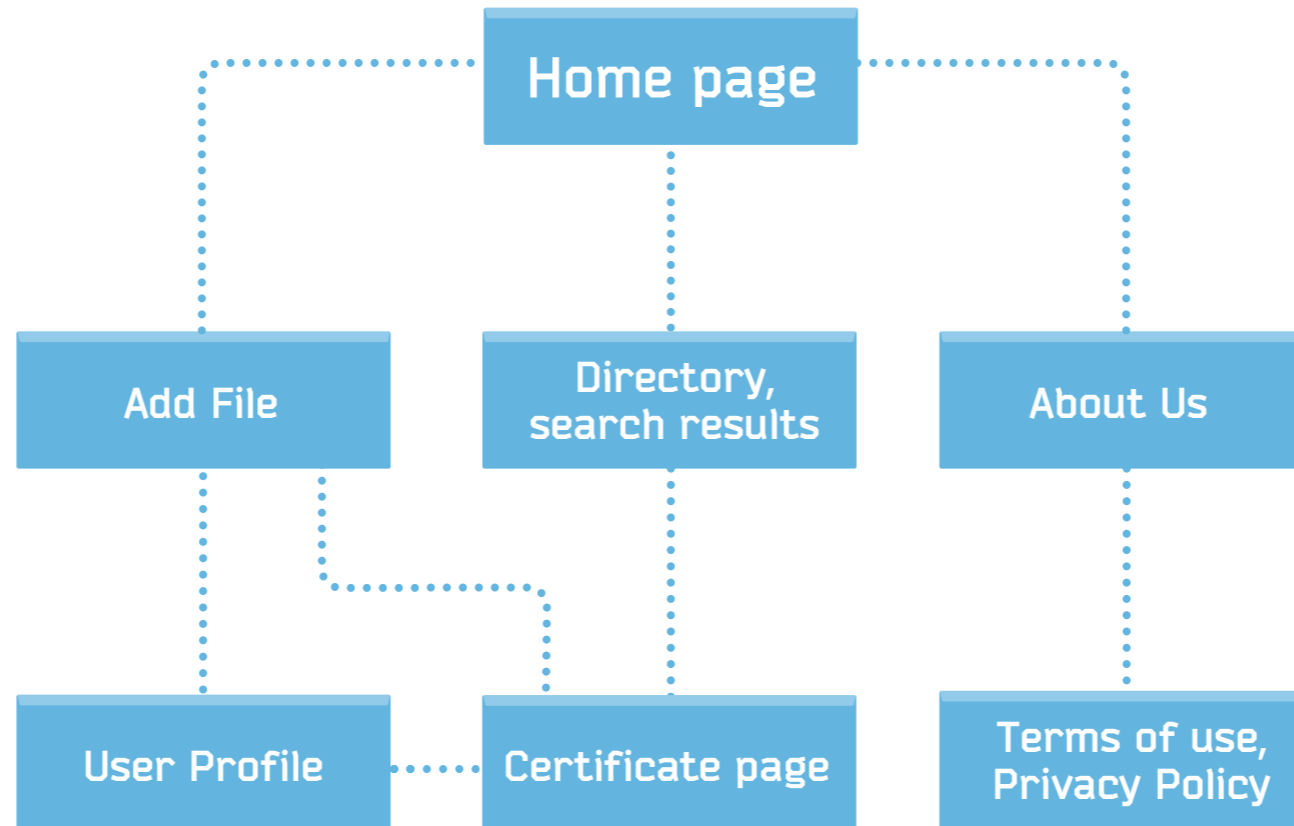

Project development

Website pages design

Information architecture

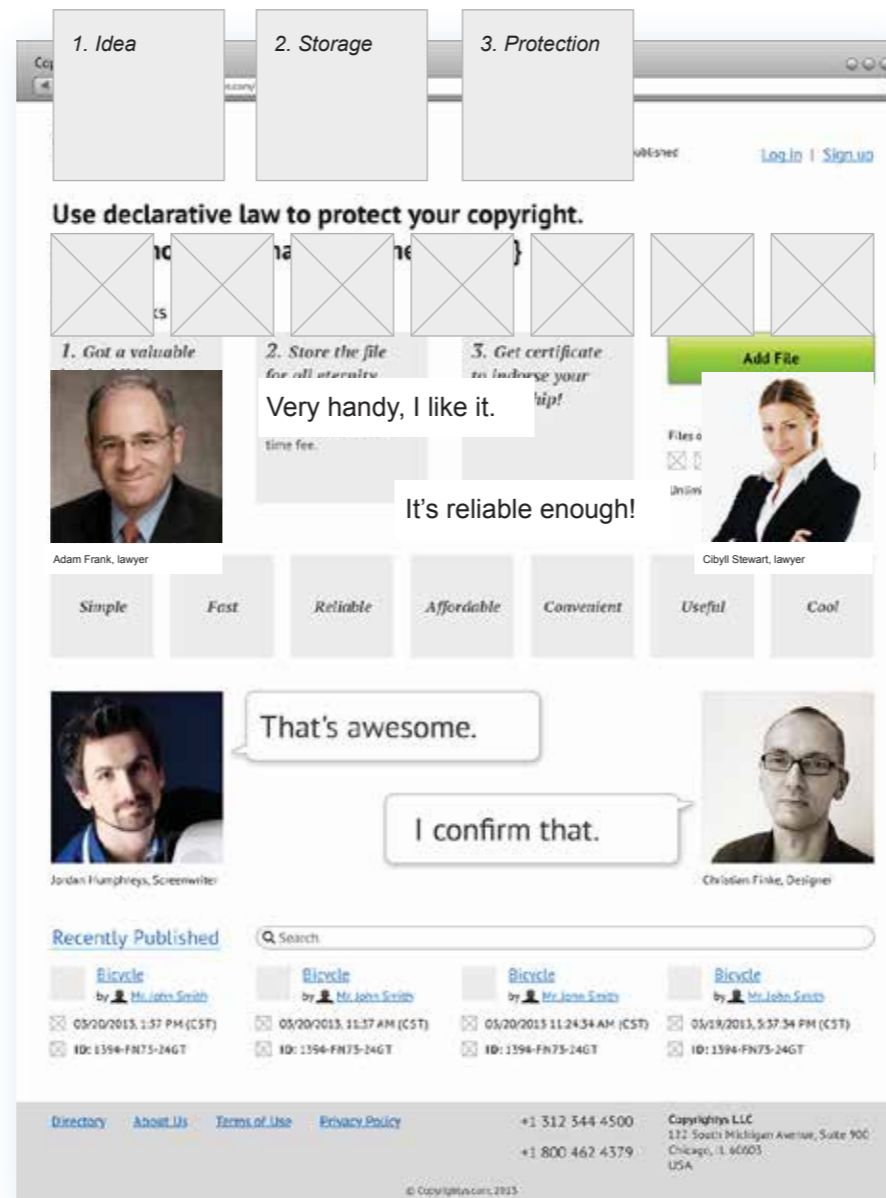

Make the list of tasks, functions and content for all pages. Draw the website map:

Having discussed with the client details of payment system and user profile publicity degree, we proceed to the project development stage.

Project development

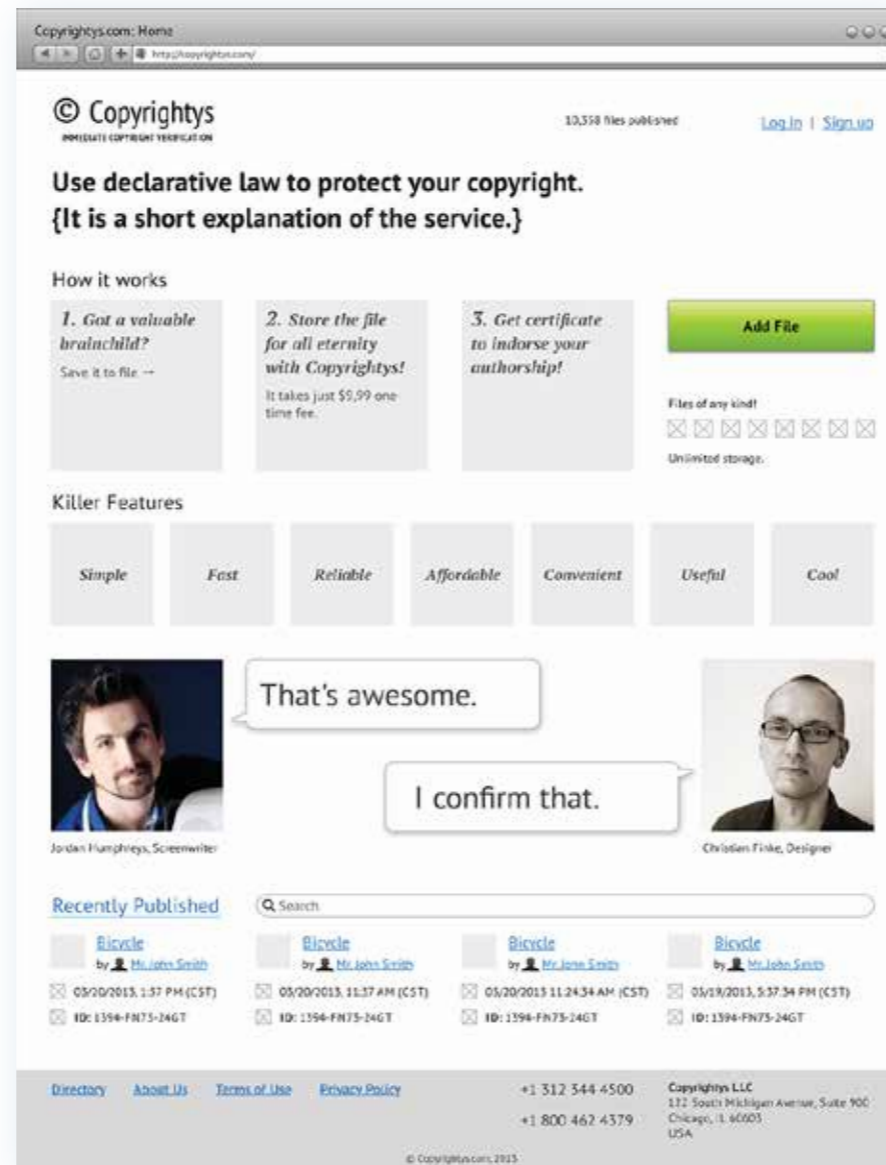

Based on the first stage results we create the home page sample:

Customer asks to correct texts and reconsider home page characters.

Project development

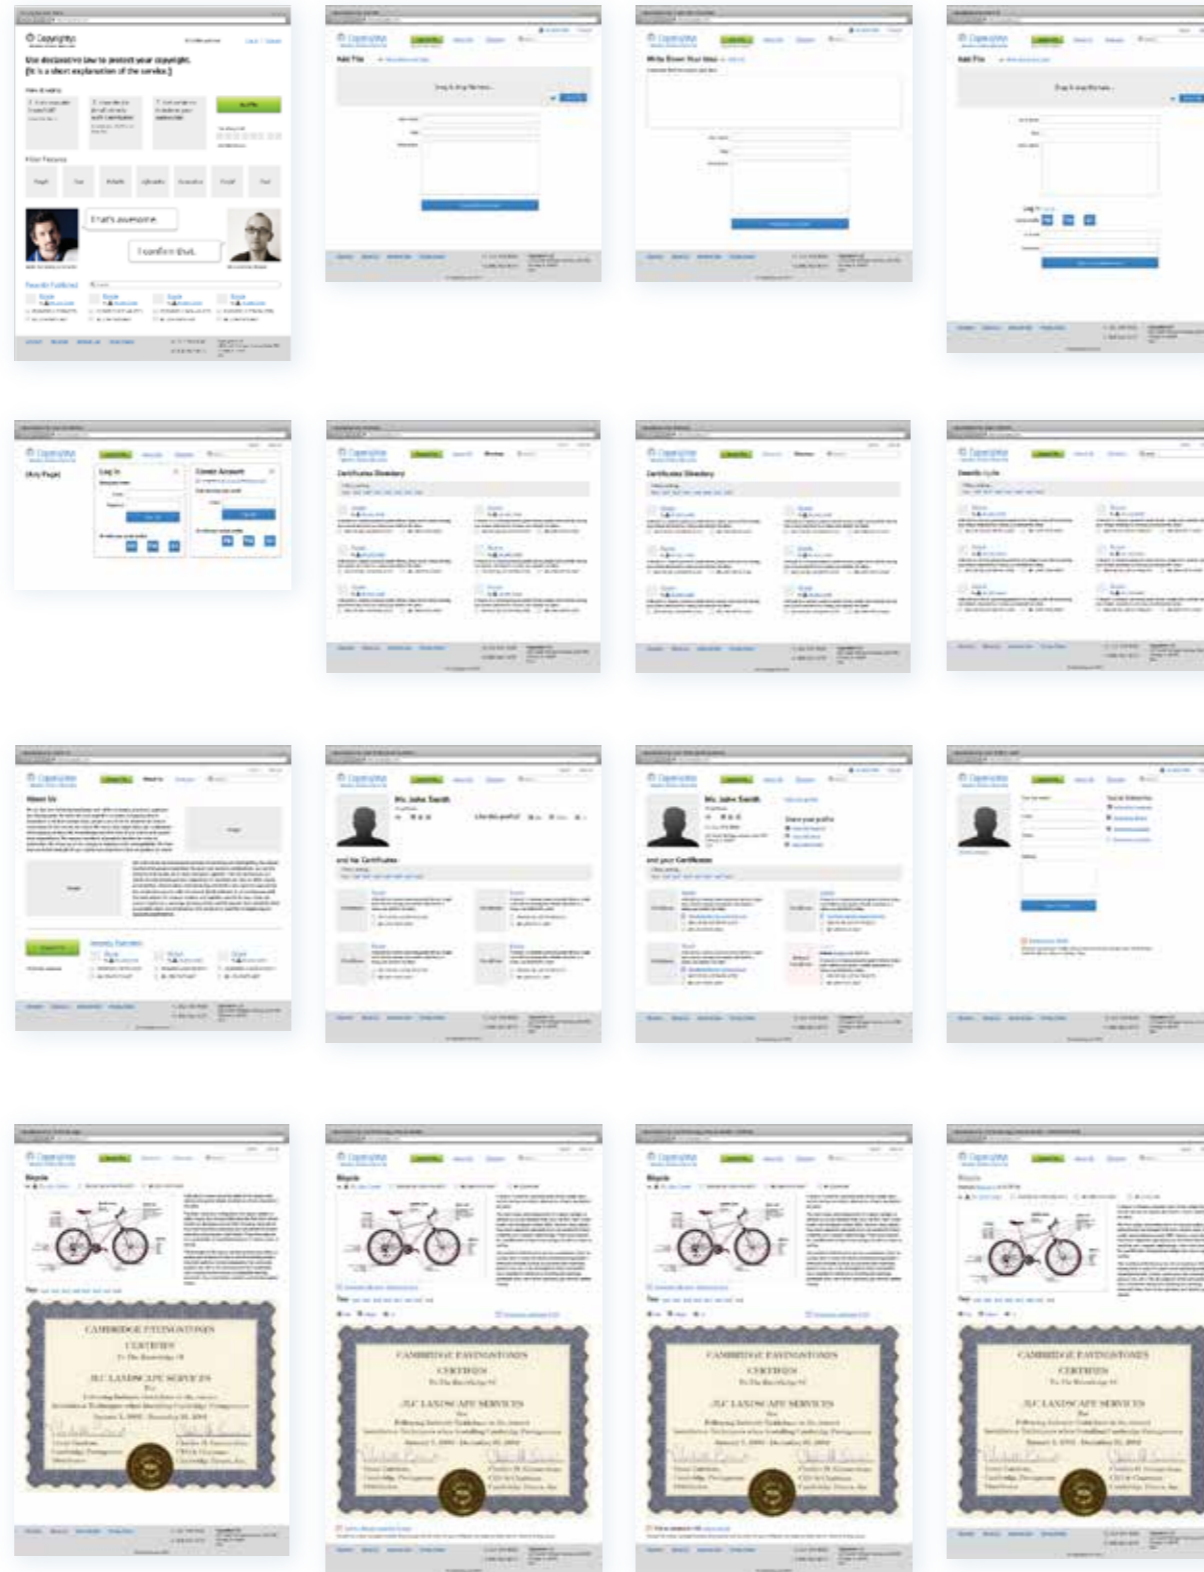

Change lawyers for screenwriters and designers, rewrite the text.

✓ The sample has been approved.

Project development

Create all other pages samples according to the website map:

Website design

At the same time make the first tries to create design for the website:

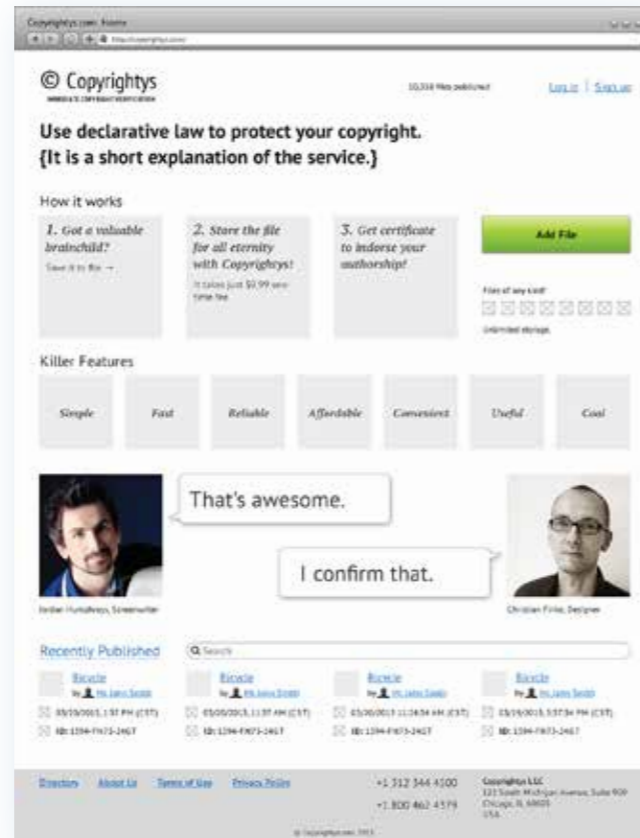

Client likes the design, but asks to think out something more bright for the home page.

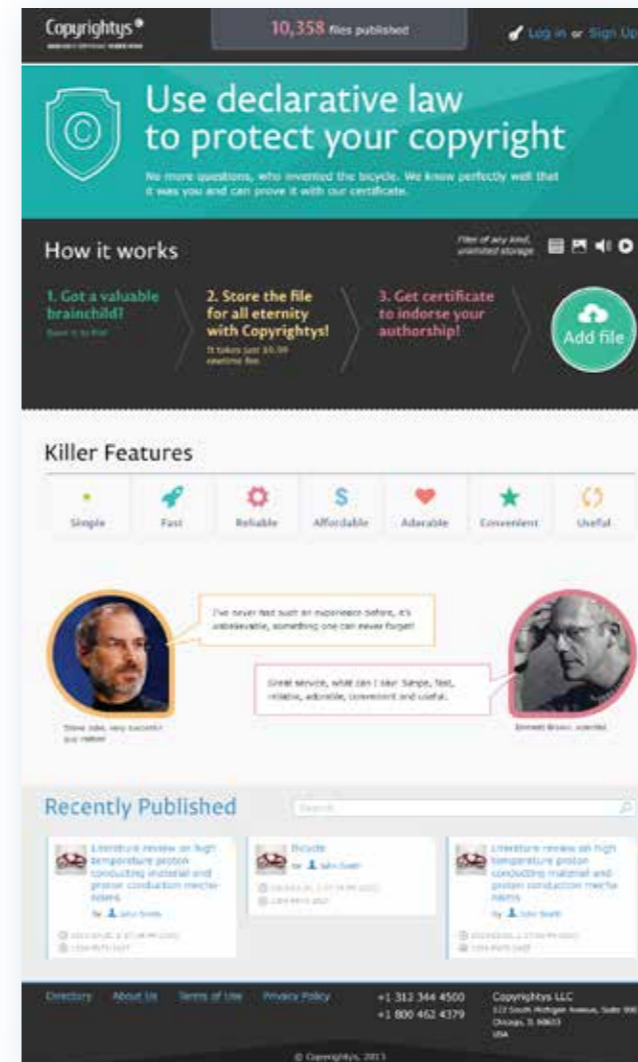

Home page

Add more colours, refine details and buttons, create all other pages.

Prototype

Design

✓ The sample has been approved.

About Us page

Customer is thinking about texts for About Us page. Our suggestion is to show the service creator here and tell what this service has been designed for. Idea has been accepted, we start working on the page.

The screenshot shows the 'About us' page of Copyrightys. At the top, there is a navigation bar with the Copyrightys logo, an 'Upload' button, and links for 'About Us' and 'Directory'. A search bar is also present. The main heading is 'About us'. Below it, the 'Creators' section features a portrait of Steve Wozniak and a text block about the founding of Apple. The 'Features' section describes the service for creative professionals and includes a diagram with icons for a camera, microphone, laptop, and document. A section titled 'You can upload various kinds of files to the Copyrightys storage:' lists supported file types: Images, Video, Sound, Text, Vector files, HTML files, Animations, Code, and Presentations. The footer contains navigation links, contact information (+1 312 344 4500, +1 800 462 4379), the company address (Copyrightys LLC, 122 South Michigan Avenue, Suite 900, Chicago, IL 60603, USA), and a copyright notice for 2013.

In the end we receive this:

Home page which briefly tells about system benefits.

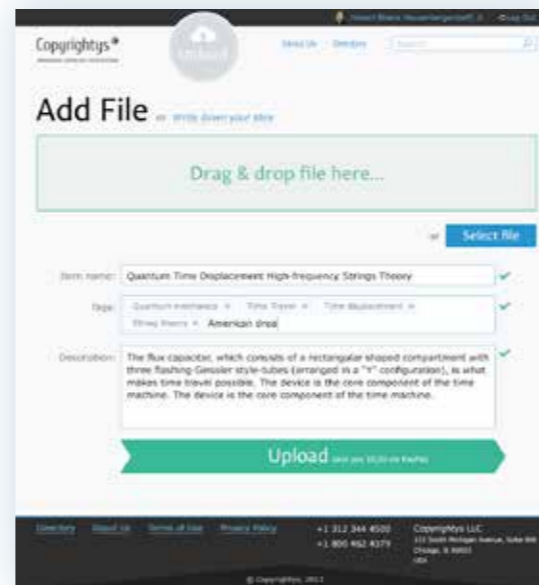

How the service works:

After registration.....

...user uploads file on server...

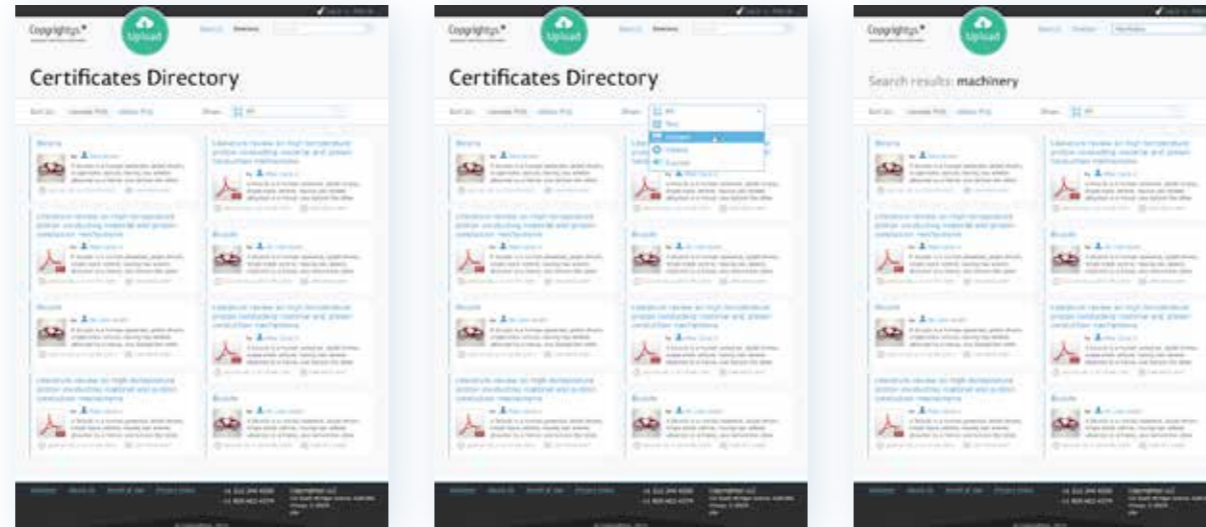

...and it appears on the list.

Customer feedback

Over past 20 years this is my best experience of working with designer.

Excellent work, thank you.
